How Populations Grow Guided Answer Key

24. Explain why a large value for $(K-N)/K$ predicts growth close to the maximum rate of increase for this population. K (carrying capacity) - N (population size) is the number of additional individuals the environment can support, so $(K - N)/K$ is the fraction of K that is still available for population growth. When N is small compared to K , the term $(K - N)/K$
