The Ford Kent is an internal combustion engine from Ford of Europe. Originally developed in 1959 for the Ford Anglia, it is an in-line four-cylinder overhead-valve-type pushrod engine with a cast-iron cylinder head and block.. The Kent family can be divided into three basic sub-families; the original pre-Crossflow

You could argue that a Kent engine is a  
Kent engine whether in Crossflow or Pre-  
Crossflow form, but if you're after period  
correctness then the later engine  
doesn't really look right. The issue is, if  
you want lots of performance, the Pre-  
Crossflow's maximum standard capacity  
is a mere 1498cc, or 1558cc if you use a  
Lotus configuration.

borrowed from the Ford 351 Cleveland engine family. A common upgrade for a crossflow head engine is to use 351 Cleveland roller tip rocker arms.

### **Ford straight-six engine - Wikipedia**

Examples. In the UK, "Crossflow" is also used to refer specifically to Ford Motor Company's Kent Crossflow four-cylinder OHV engine, and its short-block "Valencia" derivative which has been used in cars from the 1960s up to the present day, albeit with the addition of fuel injection and a modern engine management system. The term was also briefly used in the early 1980s in Australia for the ...

### **Crossflow cylinder head - Wikipedia**

The crossflow was the successor to the pre-crossflow and was similarly a "modular" engine. The bore stayed the same size (81mm) right the way from the 940cc engine up to the 1600. All the capacity increases were achieved with progressively longer stroke cranks.

This engine was introduced in the Ford Mk2 Cortina and differs from the earlier units by having the carb on the left and the exhaust on the right - hence, 'crossflow.' They also varied from Pre-X/Flows in that the combustion chamber was shifted from the head to the bowl of the piston and were know as BIP engines
