Linear Programming Examples And Solutions

However, there are constraints like the budget, number of workers, production capacity, space, etc. Linear programming deals with this type of problems using inequalities and graphical solution method. Example: On the graph below, R is the region of feasible solutions defined by inequalities $y > 2$, $y = x + 1$ and $5y + 8x < 92$. Find the greatest value of $2y + x$ which satisfies the set of inequalities, where x and y are integers. Solution: We are looking for integer values of x and y in the ...

Linear programming example 1987 UG exam. Solve the following linear program: maximise $5x_1 + 6x_2$. subject to $x_1 + x_2 \leq 10$ $x_1 - x_2 \geq 3$ $5x_1 + 4x_2 \leq 35$ $x_1 \geq 0$ $x_2 \geq 0$. Solution. It is plain from the diagram below that the maximum occurs at the intersection of $5x_1 + 4x_2 = 35$ and $x_1 - x_2 = 3$
